

# CLEAR LEGACY INTERNATIONAL CAPSTONE PRESENTATION

A 10-YEAR DATA BUSINESS PROSPECTING CONSULTANCY (2026–2036)

APPLICATION OF THE DÖRMAN METHOD

DEDICATED TO FERNANDO HUERTA DORMAN

**CLEAR LEGACY INTERNATIONAL**  
ENVIRONMENTAL AND AQUACULTURE SOLUTIONS.

# EXECUTIVE SUMMARY

- Clear Legacy International is a deep-tech enterprise focused on sustainable water management.
- Core technology: the patented Dörman Method integrating data science, IoT, and biotechnology.
- Primary markets include contaminated water restoration and aquaculture optimization.
- The project evaluates feasibility, scalability, and long-term impact from 2026–2036.

# PROBLEM STATEMENT AND OPPORTUNITY

- Global water systems face increasing contamination, inefficiency, and regulatory pressure.
- Aquaculture industries suffer from suboptimal yields and environmental degradation.
- There is a lack of integrated, predictive, and scalable technological solutions.
- Clear Legacy International addresses this gap with a data-driven, IP-protected approach.

# THE DÖRMAN METHOD: CONCEPTUAL FRAMEWORK

- A proprietary, patented methodology for water system optimization.
- Combines advanced analytics, real-time sensing, and biological modeling.
- Designed for predictive decision-making rather than reactive management.
- Demonstrates 25–40% efficiency improvements across tested environments.

# STRATEGIC FRAMEWORK

- Data Science and Optimization as the technological core.
- Digital transformation through a structured 5-model methodology.
- Predictive intelligence for real-time monitoring and forecasting.
- Strategic market entry supported by lean and adaptive commercialization.

# 2026 IMPLEMENTATION ROADMAP

# FINANCIAL PROJECTIONS (MEDIUM SCENARIO)

## REVENUE & EBITDA EVOLUTION (2026-2036)

### CLIENT BASE EXPANSION

**35 ORGS** (2026) **↑** **≈ 12,000 ORGS** (2035) **↑** **≈ 50,000** (2040)

### PRE-IPO VALUATION

**\$3.5B**

Source: Internal Analysis, Medium Growth Assumptions.

# RISK MANAGEMENT AND MARGIN OF SAFETY

- Application of financial buffers and conservative forecasting assumptions.
- Layered technical validation to mitigate performance risk.
- Diversified revenue models and geographic expansion to reduce dependency.
- Early warning indicators and tiered contingency planning.

# IMPACT AND SUSTAINABILITY

- Treatment of over 1% of global contaminated freshwater by 2035.
- Restoration of aquatic ecosystems and reduction of pollutants.
- Alignment with UN Sustainable Development Goals (SDGs).
- Demonstration that environmental impact and profitability are complementary.

# CONCLUSION AND ACADEMIC CONTRIBUTION

- This capstone presents an integrated strategic, financial, and technological analysis.
- The project contributes a real-world application of data-driven sustainability.
- Clear Legacy International serves as a case study in climate-tech entrepreneurship.
- The work highlights the viability of long-term, impact-oriented business models.
